

PARTH PARIKH

(818) 917-6738 • parikhparth23@gmail.com • San Francisco Bay Area

SUMMARY

Software engineer with 14 years of experience leading large-scale system architecture, API implementation, and AI initiatives at global consumer ecosystems, industrial-scale e-commerce applications, and high-traffic social/content networks. Expertise in Python, backend services, CI/CD, and scaling infrastructure to support 600+ million DAUs. Recently focused on AI/ML-driven solutions and modernizing testing strategies.

TECHNICAL SKILLS

Languages: Python (FastAPI, Django, Flask), Go, Java, Bash, Swift

Backend & Distributed Systems: Microservices, REST APIs, Event-Driven Architecture, Kafka, ETL Pipelines, Async Processing, Caching, Distributed Systems, System Design

Cloud & Infrastructure: AWS, GCP, Kubernetes, Docker, Lambda, Buildkite, Jenkins, BigQuery, PostgreSQL, MongoDB, S3

Observability & Reliability: Grafana, Prometheus, Structured Logging, Monitoring, Alerting, Load Testing, CI/CD

AI/LLM Systems: GPT-4, Claude, Gemini, LangChain, LangGraph, MCP, RAG, Vector Databases, Vertex AI, LLM Evaluation Pipelines, Tool Calling, Prompt Engineering, Codex, Claude Code, Cursor, Windsurf, Antigravity

Databases & Storage: PostgreSQL, MongoDB, Supabase, ChromaDB

AI & SYSTEMS PROJECTS

LeetSystemDesign - <https://leetsystemdesign.com>

- AI-powered evaluator using Google Gemini analyzing system design architectures for scalability, bottlenecks, reliability
- Custom scoring rubric simulating Staff-level interviews; 90%+ accuracy, 500+ users, 100+ evaluations/day
- Built with FastAPI, LangChain, vector embeddings; tested 20+ prompt variants for optimal feedback

Autonomous Agents & MCP

- Designed LangGraph agentic workflows automating documentation retrieval and engineering decisions
- Built MCP agents bridging LLMs with internal databases; 40+ engineers, 85% adoption
- Vector embeddings for semantic search: reduced codebase search 85% (20min → 3min)

EMPLOYMENT HISTORY

Sr. Software Engineer — Reddit | San Francisco (Remote), November 2021 – Present

- Developed and optimized backend services and data-delivery pipelines supporting high-traffic user-facing features across Reddit's product ecosystem

- Collaborated with service teams to redesign API contracts, improve data modeling, and optimize end-to-end latency for content, community, and messaging workloads
- Designed and implemented serverless data ingestion ETL pipeline using AWS (S3, Lambda) and Python to extract, transform, and load data into BigQuery for real-time analysis
- Strengthened system observability by enhancing telemetry, structured logging, alerts, and coverage for integration and load testing
- Designed and scaled core CI architecture on Buildkite, enabling rapid application deployment to support 110 million DAUs

Software Engineer — Apple (CarPlay) | Cupertino (Remote), June 2020 – November 2021

- Contributed to the development of Apple CarPlay system experiences, focusing on performance, reliability, and seamless interactions between iOS frameworks and in-vehicle infotainment systems
- Developed internal debugging and simulation tools to validate CarPlay behaviors across diverse device and OEM vehicle environments
- Implemented core modules powering navigation, messaging, and voice-driven workflows while meeting Apple's strict safety, latency, and security standards

Software Engineer — Rakuten Rewards | San Mateo, February 2018 – May 2020

- Architected and maintained backend microservices and data pipelines supporting high-traffic consumer reward features
- Designed and implemented the Onboarding Recommendation Service, a real-time ML pipeline recommending stores to new users based on historical engagement and behavioral signals
- Developed the Event Service, a scalable analytics ingestion and fan-out pipeline processing all user-generated and internal events
- Built and integrated the Experiment Service enabling A/B testing, feature flagging, and controlled rollouts across the application ecosystem

Senior Software Engineer — Nokia | Sunnyvale, November 2013 – December 2017

- Developed complex reusable UI and API testing frameworks supporting multiple product lines
- Worked on digital health, Android applications, and VR live-streaming backend services
- Identified and resolved memory leaks and null pointer exceptions using static analysis tools (gcov, lcov, infer)
- Coordinated with distributed teams across Europe and Asia to meet timelines and deliver projects on schedule

Mobile QA Engineer — Apexon | Santa Clara, June 2012 – November 2013

- Identified automation scope and created comprehensive test scenarios for Android, iOS, and Windows Phone applications
- Performed functional, regression, compatibility, usability, and GUI testing across multiple mobile platforms

EDUCATION

- **MS Computer Engineering** — San Jose State University (2010-2012)

- **BE Electronics & Communication** — Gujarat University (2006-2010)

CERTIFICATIONS

- Kaggle Generative AI
- Kaggle AI Agents Intensive (hands-on LLM/agent training)
- Stanford High-Impact Communication
- [Machine Learning Specialization](#)
- [Mathematics for Machine Learning](#)
